The full title, which may be quite, quite long indeed

The (optional) subtitle

Authors Name

Month and day, year

Workshop Name
Computer Science Department
IME USP

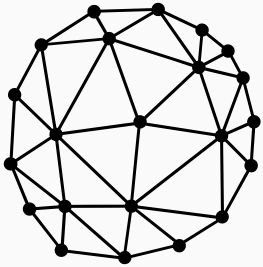
Overview

Overview

Context

- **The copyright compromise seeked to balance public and private interests**
- **Nowadays, changes to the law and technological advances all but destroyed this balance**

- **As a reaction, the free software movement was created**
  - Return to sharing (of source code) and to collaboration (exchange of ideas and team work)
  - Formalization with the GNU project
  - Only really possible when there are favourable conditions for source code exchange
    - » *as highlighted by the growth that accompanied the Internet boom*



INCT

InterSCity

This is a problem!

Goals

Functional requirements

- Integration and Management of IoT Devices
- Data Acquisition, Storing, and Processing
- Context-awareness
- City Resource Discovery
- Geolocation-based Services
- External data access

Overview

Concepts

Functional requirements

- Integration and Management of IoT Devices
- Data Acquisition, Storing, and Processing
- Context-awareness
- City Resource Discovery
- Geolocation-based Services
- External data access

Non-functional requirements

- Interoperability
- Scalability
- Security
- Privacy
- Evolvability
- Adaptability

Theorems and proofs

Extra info

- It is often useful to have some extra slides addressing likely questions from the audience at the end of the presentation
- By putting them after the “appendix” command, they are not counted in the page count indicator
